Product Name

mTOR, ELISA Kit

Full Product Name

Human Phospho-mTOR ELISA Kit

Product Gene Name

mTOR elisa kit

Research Use Only

For Research Use Only. Not for use in diagnostic procedures.

Species Reactivity

Human

Product Note

Select online data sheet information is drawn from bioinformatics databases, occasionally resulting in ambiguous or non-relevant product information. It is the responsibility of the customer to review, verify, and evaluate the information to make sure it matches their requirements before purchasing the kit. Our ELISA Kit assays are dynamic research tools and sometimes they may be updated and improved. If the format of this assay is important to you then please request the current manual or contact our <u>technical support team</u> with a presales inquiry before placing an order. We will confirm the current details of the assay. We cannot guarantee the sample manual posted online is the most current manual.

Other Notes

Small volumes of mTOR elisa kit vial(s) may occasionally become entrapped in the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container's cap. Certain products may require to ship with dry ice and additional dry ice fee may apply.

Searchable Terms for mTOR purchase

MBS167814 is a ready-to-use microwell, strip plate ELISA (enzyme-linked immunosorbent assay) Kit for analyzing the presence of the mTOR, ELISA Kit target analytes in biological samples. The concentrates standards or positive controls render a theoretical kit detection range in biological research

mTOR. The ELISA analytical biochemical technique of the MBS167814 kit is based on mTOR antibody-mTOR antigen interactions (immunosorbency) and an HRP colorimetric detection system to detect mTOR antigen targets in samples. The ELISA Kit is designed to detect native, not recombinant, mTOR. Appropriate sample types may include undiluted body fluids and/or tissue homogenates, secretions. Quality control assays assessing reproducibility identified the intra-assay CV (%) and inter-assay CV(%).
